
PROFESSIONAL SUMMARY

Versatile software engineer with deep experience leading and contributing across all stages of the software development lifecycle including frontend, backend, and cloud infrastructure. Skilled in modern frameworks like React, Angular, and .NET, with expertise in cloud platforms such as Microsoft Azure and AWS. Proven ability to design, develop, and deploy scalable, secure, and performant solutions using diverse languages including C#, JavaScript/TypeScript, PHP, C, and C++. Experienced in automating CI/CD pipelines and integrating cloud-native services to accelerate development and operational efficiency. Adept at collaborating with cross-functional teams to deliver innovative, business-aligned software products following industry best practices and security standards.

EMPLOYMENT HISTORY

SENIOR SOFTWARE ENGINEER**2021 - Present***Microsoft**Redmond, US*

- Designed and implemented internal automation tools using C#, PowerShell, .NET Core APIs, and YAML, reducing manual tasks and boosting productivity, reusability, and onboarding efficiency by 70%.
- Developed an API to automate binary signing during pipelines and built an Angular-based real-time SPA dashboard integrated with Azure services to monitor driver signing statuses. The solution streamlined tasks including testing, attestation, and production signing of binaries, enhancing visibility and operational efficiency.
- Built a robust Git semantic versioning library in .NET, enabling custom versioning, Git-based versioning during pipelines, and seamless integration for packaging and publishing workflows.
- Managed and optimized over 3000+ pipelines for multiple teams, improving deployment efficiency by 70% through multi-stage YAML-based CI/CD automation and troubleshooting build failures.
- Experienced in deploying applications on Azure App Services and automating infrastructure provisioning using ARM templates, including image creation, Azure Key Vault integration, and Azure service configurations. Skilled in managing Azure networking components to ensure secure and reliable connectivity across cloud resources.

FULL STACK DEVELOPER**2020 - 2021***North American University**Houston, US*

- Migrated the School Management System from PHP (Symfony) to .NET and Angular, boosting performance by 70% and improving user experience. Developed a secure online exam module to reduce cheating by 80% and implemented an auto-certificate generation system, cutting teacher workload by 50% and streamlining processes.
- Achieved 99% decrease in lost environment and improved tracking of university staff by instituting comprehensive IT inventory system.
- Enhanced code quality and minimized bugs by 90% through application of Test-Driven Development (TDD) and Integration testing which led to smoother user experience and higher customer satisfaction.
- Migrated all on-premise university applications from the local data center to Microsoft Azure, leveraging PaaS and IaaS solutions such as Azure App Services and Azure SQL Database to enhance scalability, reliability, and efficiency. Additionally, integrated AWS services like S3 for storage solutions, and designed and implemented GitHub- and Azure DevOps (ADO)-based CI/CD pipelines to automate deployment, testing, and monitoring—ensuring seamless cross-cloud integration and operational excellence.

FULL STACK DEVELOPER**2014 - 2019***MIG**Dushanbe, Tajikistan*

- Collaborated with client team to design and implement cutting-edge technologies like ASP.NET Core, EF Core, and C# to meet user specifications.
- Engineered HR system overseeing staff management, recruitment, administration, payroll, and HR planning for seamless operations.
- Led front-end application development in .NET, JS and AJAX using C# and back-end development in SQL Server for enhanced user experience.
- Conducted proof-of-concept projects applying .NET Model-View-Controller, MVC pattern, and Repository pattern. Implemented AngularJS to interact with RESTful web services and executed JWT auth/role for authentication and authorization.
- Utilized ASP.NET Core MVC framework, Web forms, LINQ, Entity Framework, XML, REST services development, jQuery, design patterns, Git, and Bitbucket extensively.
- Managed multistage projects, including ERP/HR systems and demonstrated comprehensive expertise in ASP.Net Core, EF Core, PostgreSQL, LINQ, Docker, and local Server through IIS.

EDUCATION

MASTER DEGREE IN COMPUTER SCIENCE

North American University

Safford, US

GPA: 3.5

SKILLS

.NET (Expert), C# (Expert), ASP.NET, SQL (Expert), Angular (Experienced), JavaScript (Experienced), TypeScript (Experienced), PowerShell (Expert), Azure (Expert), Docker (Experienced), Git (Expert), CI/CD (Expert), MVC, Entity Framework, RESTful Web Services, JWT, Azure DevOps, React, PHP, Laravel, Symphony, JQuery, .Net Core (Expert), Bootstrap, HTML, CSS3, PostgreSQL, AWS, E2C, AmazonLightsail, AWS S3, Docker, BinSkim, UnitTest, Integration Test, MVC, UoW Pattern, Repository Pattern, Clean Architecture, DDD Architecture, ARM, ADO Extension, Grafana, .

ADDITIONAL INFORMATION

KEY PROJECTS

Internal Signing Portal, Microsoft

- Developed an internal API to streamline the signing process for firmware, capsules, drivers, and app binaries, including functions for testing, attestation, WHQL signing, and more. Additionally, created an extension to integrate this tool into the pipeline, automating binary signing during the pipeline process. Also, developed a single-page application using Angular to provide a user-friendly interface for monitoring the status of the drivers.
- Developed an internal library to support versioning for package drivers, specifically implementing Git semantic versioning. Additionally, worked on automating the onboarding process by creating a .NET application that interacts with Azure Repos, allowing seamless onboarding of various project types such as drivers, capsules, and web APIs, eliminating the need for manual developer intervention.

KEY PROJECTS

School Management Software | IT Inventory System, NAU

- Migrated the School Management Software (SMS) from PHP (Symfony) to .NET Core and Angular, integrating new features and boosting performance and scalability by 70%, while enhancing user experience and operational efficiency.
- Developed an internal IT inventory system for the university from the ground up, achieving a 99% reduction in lost equipment and improving staff tracking through a comprehensive solution.

KEY PROJECTS

ERP System, MIG

- Developed ERP System integrating HR, inventory, sales and marketing, purchase, finance and accounting modules, generating \$500K profit for company.

KEY PROJECTS

HR System, MIG

- Built and implemented comprehensive HR system to oversee staff retention, recruitment, onboarding, administration, payroll management, and HR strategic planning.

KEY PROJECTS

Hospital Information System, MIG

- Developed various modules for Hospital Information System, such as registration, patient management, documents, and reports.

KEY PROJECTS

Accounting System, MIG

- Created tailor-made Accounting System for advertising agencies, incorporating modules for customer control, income tax, outgoing tax, reporting, and employee management.

KEY PROJECTS

React - Game-hub

Game HUB

Features

- ◆ **Game Discovery:** Browse games with filtering by genre, platform, and search
- ◆ **Dark/Light Mode:** Toggle between dark and light themes
- ◆ **Responsive Design:** Works seamlessly on desktop, tablet, and mobile
- ◆ **Real-time Search:** Search games by title
- ◆ **Platform Filtering:** Filter games by platform (PC, PlayStation, Xbox, etc.)
- ◆ **Genre Filtering:** Filter games by genre
- ◆ **Sorting Options:** Sort games by relevance, release date, rating, etc.
- ◆ **Modern UI:** Beautiful, accessible interface built with Chakra UI v3
- ◆ **Core Technologies**
 - ◇ **React 18** - UI library
 - ◇ **TypeScript** - Type-safe JavaScript
 - ◇ **Vite** - Fast build tool and dev server
 - ◇ **Chakra UI v3** - Modern component library with theming system
